

CV Report for Job: Developer Node

Score: 75/100

Analysis

The candidate demonstrates significant experience with Node.js and related technologies, showcasing several projects involving web development and ERP module deployment. While their experience is relevant, the lack of specific quantifiable achievements and the limited details provided in the CV hinder a complete assessment.

Insights

Strong experience with Node.js, Angular, and other relevant frameworks demonstrated through multiple internships and freelance work. Experience with various databases (MySQL, PostgreSQL, MongoDB) and project management tools (Jira, Trello) indicates a well-rounded skill set. The candidate's focus on web development aligns well with the job requirements.

Weaknesses

The CV lacks specific quantifiable achievements. Adding metrics (e.g., "increased website traffic by 20%") would significantly strengthen the application. The description of projects is too brief. More detailed explanations of responsibilities and contributions are needed. The experience level stated in the job description ("master") may not fully align with the candidate's current educational background. Clarification is needed regarding their post-graduate plans.

Skills

Node.js

Angular

React

MySQL

Git

Spring Boot
