

CV Report for Job: Convex Developer

Score: 40/100

Analysis

The candidate's CV demonstrates experience in developing and implementing AI-powered recruitment tools, including semantic analysis for CV matching and intelligent report generation. While the CV showcases strong skills in AI and software development within the context of a recruitment platform, it lacks direct experience with Convex, the specific technology required for the advertised role. The focus is heavily on the development of the recruitment platform rather than specific skills directly transferable to a Convex developer position.

Insights

Experience in building an AI-powered system for CV analysis and matching, showing proficiency in relevant technologies.
Demonstrated ability to generate reports (HTML format) programmatically, indicating relevant coding skills.
Familiarity with various testing methodologies (Lighthouse, OWASP ZAP, JMeter), suggesting a commitment to quality assurance.

Weaknesses

No explicit mention of experience with Convex, the core requirement of the job description.
The CV focuses on a broader project, making it difficult to assess specific skill levels relevant to Convex development.
Lack of demonstrable experience in production environments (Prod department).
