

CV Report for Job: developer node

Score: 70/100

Analysis

The candidate demonstrates experience with Node.js, Angular, and other relevant technologies, showcasing projects involving web development and ERP module deployment. Their CV highlights several internships and freelance work, indicating practical experience. However, the lack of detailed project descriptions and the significant language barrier (French CV) present challenges in accurately assessing the depth of their skills and experience against the "master" experience level requirement. The candidate's educational background is promising, but further clarification on the specifics of their projects and accomplishments is needed. The score reflects the positive aspects of the CV weighed against the uncertainties and the mismatch between stated experience level and demonstrable experience.
