

CV Report for Job: Developer Node

Score: 75/100

Analysis

The candidate demonstrates experience with Node.js and Angular, aligning with the job requirements. Their freelance work and internships show practical application of these skills. However, the lack of detailed project descriptions and the overall lack of clarity in the CV (due to language barrier and formatting) hinders a complete assessment. The experience level is also a concern given the "master" level requirement.

Insights

Strong experience with Node.js and Angular, evident through multiple projects.
Demonstrated ability to work independently as a freelancer.
Relevant experience in web development projects.

Weaknesses

The CV lacks quantifiable results and detailed project descriptions. It's difficult to assess the complexity and impact of their work.
The candidate's experience level appears to be below the "master" level specified in the job description. Further clarification is needed.
The CV is poorly formatted and written in a language other than English, making it difficult to fully understand the candidate's skills and experience. A well-structured CV in English is crucial.

Skills

Node.js
Angular
MySQL
React
Spring Boot
Git
